Notice of Construction – 6th and 9th Pump Station Upgrades

The 6th Ave and 9th Ave Pump Station project upgrades will begin on May 18th and will last through October. The major components to this project are the construction of a new sanitary sewer pump station and controls at 6th Ave and 9th Ave; construction of new force mains; construction of new water main and service connections; construction of a new sidewalk, and paving and striping.

Please be aware that the following areas will be affected during construction.

6th Ave Station: The surrounding vicinity of the bathrooms in Lions Park will be affected for the construction of the pump station. Construction will also take place for the length of Matson Street for the installation of the water and sewer force main. A small portion of 9th Ave will be affected for the connection of the sewer force main to the gravity sewer system.

Lions Park Parking: Parking will be limited at Lions Park for the duration of the project. The contractor will be allowed the use of the back 4 stalls ONLY on Matson Street for the staging of materials. No parking of equipment, vehicles, or materials will be allowed in any other stall to provide as much continued parking space for the public as possible. The Contractor will however be allowed to park along 6th Ave for construction vehicles and limited materials.

Swing Set: The location of the swing set is in conflict with the new wet well for the 6th Ave pump station, so the swing set will be removed by the contractor during construction. A new swing set in an alternative location will be installed this summer.

Tree Removal: The large Cherry tree near the Lions Park bathroom will be removed to make way for a new generator. New landscaping will be installed as part of this project to mitigate the tree removal.

9th Ave Station: Construction will take place from the intersection at 9th and Fjord to Nordness Street. Construction will also take place for the entire length of Nordness Street and Thompson Place.

If you have any questions about this project, please feel free to contact Senior Field Inspector Mike Lund at (360) 394-9741 or mlund@cityofpoulsbo.com or PW Foreman Keith Svarthumle at (360) 394-9755 or ksvarthumle@cityofpoulsbo.com.
